

Risk Management(RM) **of Korea Customs Service**

Korea Customs Service
Min WonKyung

Profile

Name : Min Wonkyung

Division : Passenger Information Analysis

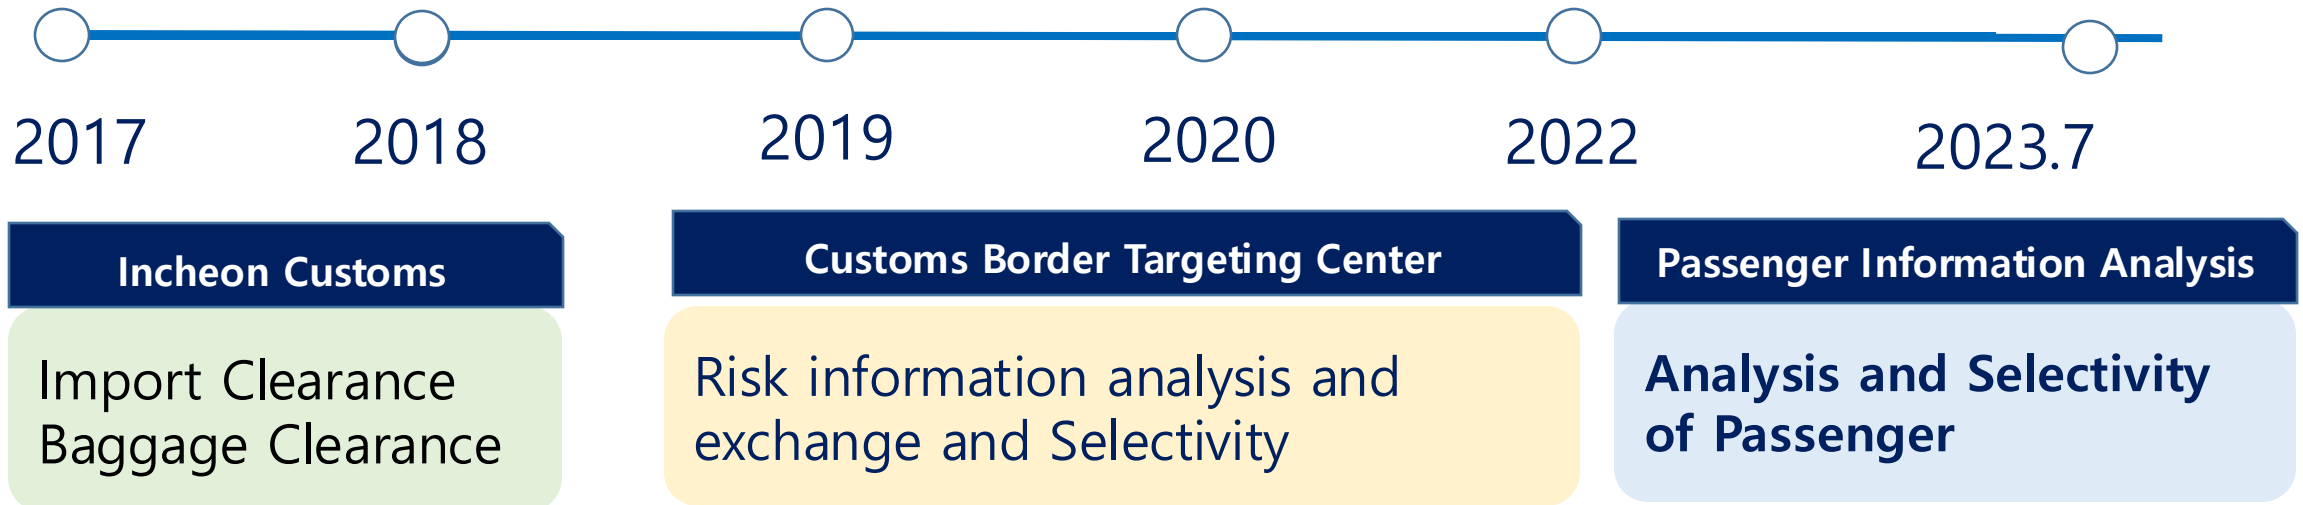

Table of Contents

- 1. Introduction of KCS's Risk Management**
- 2. Information Collection**
- 3. Risk Analysis**
- 4. Selectivity Process**

1. Introduction of KCS's Risk Management

How can we prevent high risk cargo?

Integrated Risk Management is essential

Trade Facilitation

Trade Security

Custom Border Targeting Center established Feb.2017 For Integrated Risk Management

General Management

Intelligence

Risk Analysis

Selectivity

Targeting high risk goods

Organization Chart of CBTC

KCS Headquarters

Vice Commissioner (1)

Customs Border Targeting Center (23)

General Planning (4)

Intelligence (3)

Risk Analysis (5)

Selectivity (6)

Collaborative Intelligence (5)

Domestic & Overseas Agency

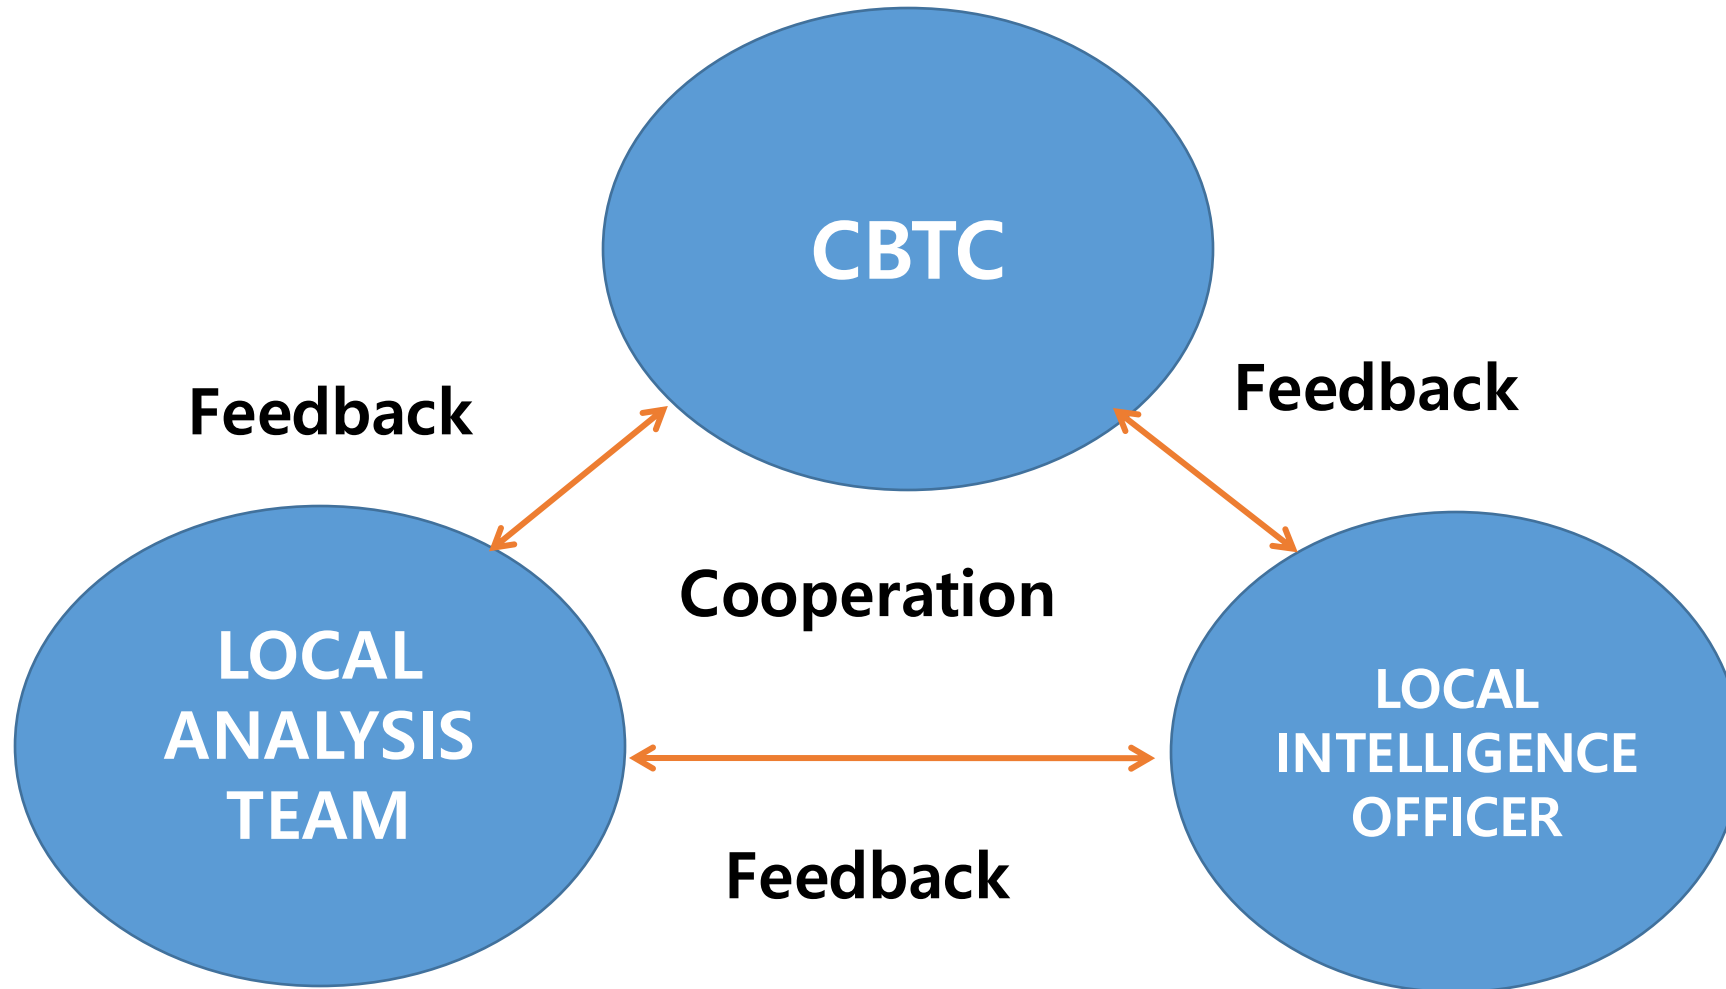

External Organization

Regional Intelligence Workforce (46)

Local Selectivity Workforce (153)

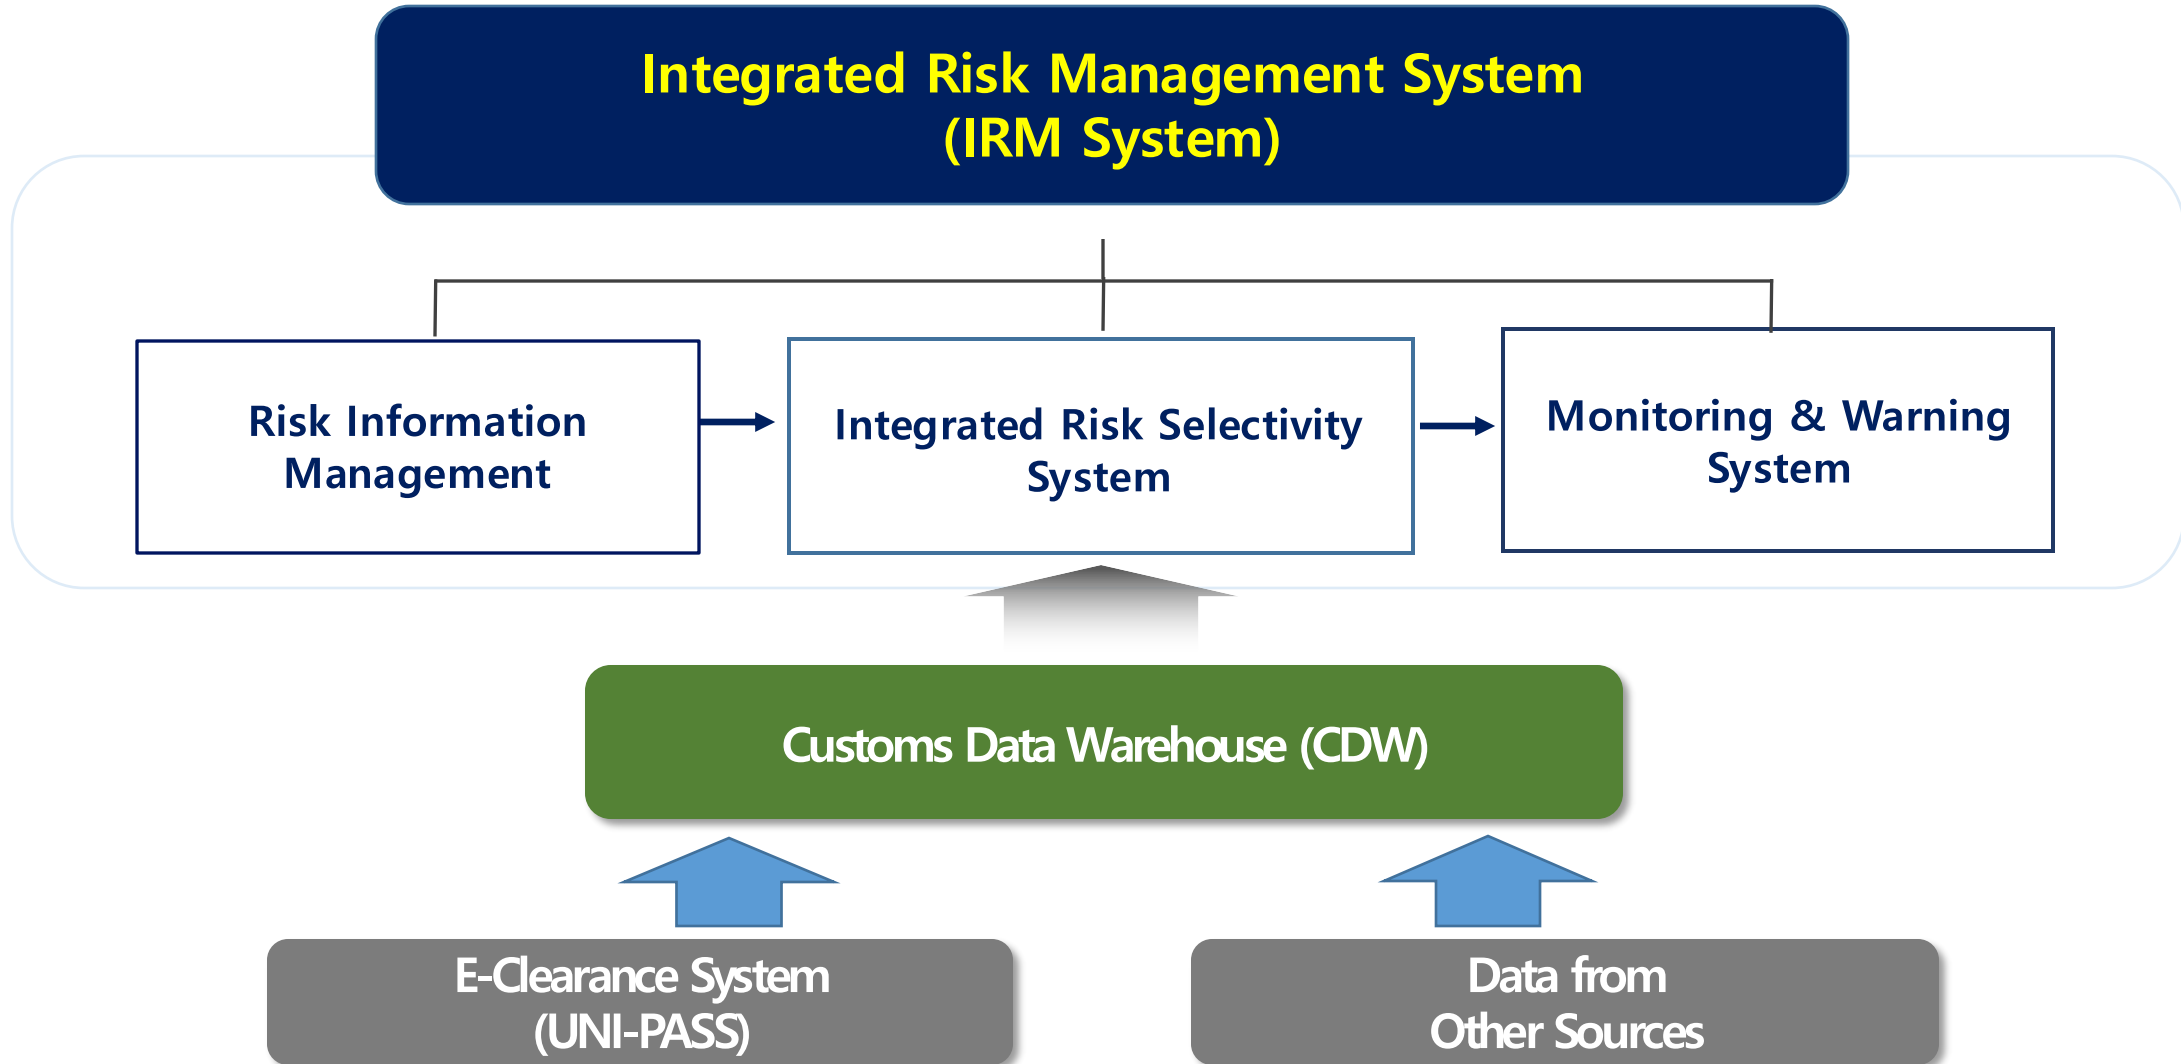

Internal Organization

CBTC and Local Teams cooperate with each other

Process of Risk Management consists of 5 Steps

Risk Identification

Register detection reports on IRM System

Registration

Registration of **detection reports by the local customs**

Categorizing detection reports
: Drug, terrorism, tax evasion etc.

Registration of various type of detection cases

: Documents, Photo, video etc.

Assessment and Sharing

CBTC members **score detection reports** based on reliability, level of risk

Key risk information is spread to all of the local customs and analyzed.

Targeting

Create the selectivity criteria by using IRM System

■ 선별항목 선택

<input type="checkbox"/>	대상서식*	선별항목*	연산자*	비교값*	위험요소	선별대상
<input type="checkbox"/>	수입신고서 <input type="button" value="v"/>	HS CODE	start with <input type="button" value="v"/>	7807,7808	<input type="button" value="위험요소"/>	<input type="button" value="선별대상"/>
<input type="checkbox"/>	수입신고서 <input type="button" value="v"/>	Registration Number	= <input type="button" value="v"/>	12345678123	<input type="button" value="위험요소"/>	<input type="button" value="선별대상"/>
<input type="checkbox"/>	수입신고서 <input type="button" value="v"/>	Origin	is contains in <input type="button" value="v"/>	CN,AU,US	<input type="button" value="위험요소"/>	<input type="button" value="선별대상"/>

	<input type="text"/>
등록사유*	<input type="text"/>
검색키워드*	<input type="text"/> 검색키워드는 쉼표(,)로 구분하여 최소 3건 이상 등록해 주십시오. 예) MASK, 마스크, 코로나

Feedback

Feedback from Customs officers on Selectivity Criteria

Feedback

Customs officers provide feedback on whether the inspection result are appropriate

EX: Article of selectivity criteria
– including 'GUN'

Inspection results : GLUE GUN,
GUNDAN, TOP GUN(movie)

Revising Selectivity criteria

Check whether the Selectivity criteria are appropriate by comparing the article of criteria

2. Information Collection

We exchange Risk information with **at Home & Abroad**

Domestic Agency

Hazardous
Drug, Food

Ministry of Food and
Drug Safety, DEA

Import Permits
Of Waste

Ministry of Environment

Foreign Customs Administrations

Exchanging of Intelligence
(70 Foreign Customs)

Meeting for
Risk management

Custom Border Targeting Center

Analysis risk information

Create Selectivity criteria

Detection Case 1 : Intelligence from National intelligence services

National intelligence services provided information of drug offender('24.4., '24.8.)

Name	Detected goods
BRISS*** CA** JOH** STEPH**	3kg of Methamphetamine
PIETE*** SAN** ELIZAB***	2kg of Methamphetamine

Analyzing information of drug offender

Incheon airport customs seized **3kg of Methamphetamine('24.9.27.)**

Detection Case 2 : Intelligence from Drug Enforcement Administration(DEA)

Drug Enforcement Administration(DEA) provided the information on the drug offender('24.4.12.)

Name	List of Smuggled Drug
Park Ge** S**	400g of Methamphetamine, 83g of Cocaine, 1.3kg ketamine

Analyzing information of drug offender

Detection Case 2 : Intelligence from Drug Enforcement Administration(DEA)

Incheon airport customs seized 10kg of Drug('24.5.15.)

*1.0kg of Methamphetamine, 1.1kg of ketamine, 1000 tablets of MDMA
7.3kg of hemp oil, 400 sheets of LSD etc.)

3. Risk Analysis

Risk Analysis

Flowchart of Analysis

Evaluation of Risk Information

Selection of Analysis Subject

Risk Analysis

Development of Selectivity Criteria

Feedback of Inspection Result

Evaluation for Timeliness, Importance, Applicability, Accuracy, Reliability, Influence

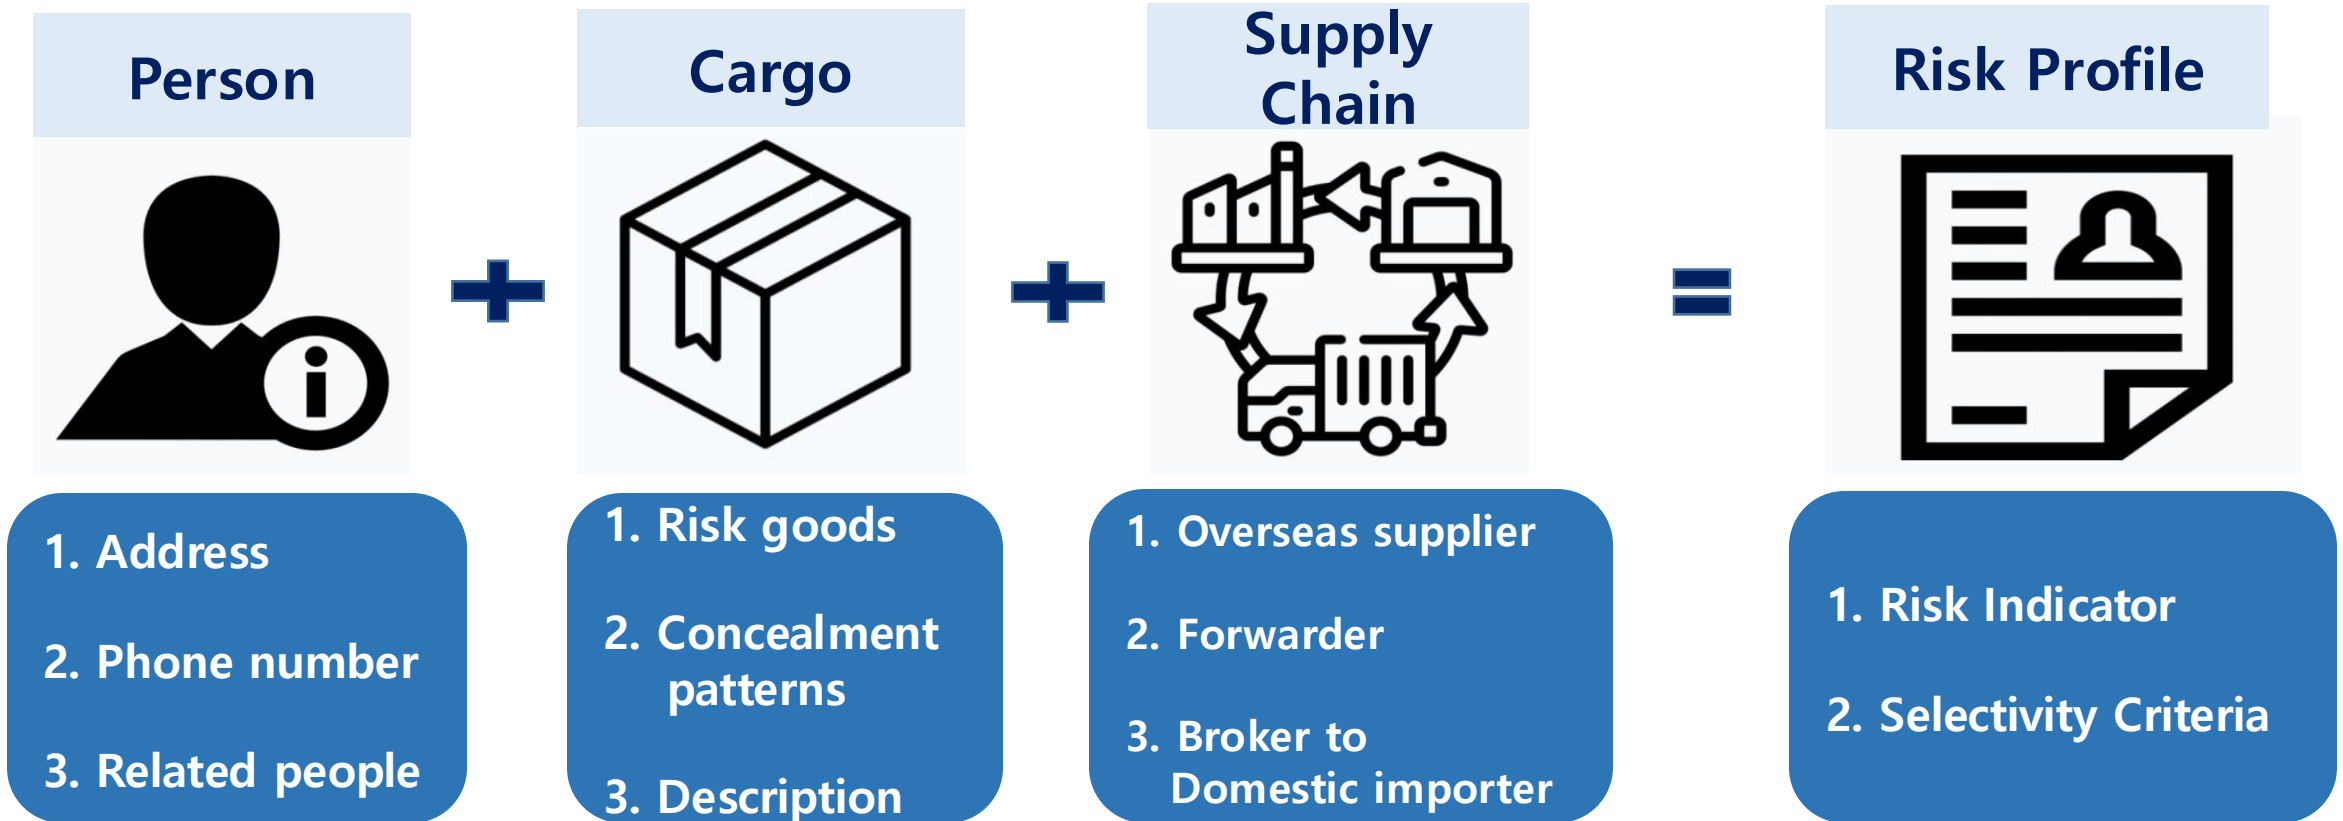

CBTC Analysts Meeting

Analysis of Risk Information

Creation of Risk Profile & Criteria

Monitoring of Inspection Result

Three factors are important in Risk Analysis.

Let's watch the video of risk management
with analysis technique

Detection Case

Points : Booking date, Duration of stay, Companion, Gender, Smuggling pattern

2. June. 2024.

- **1kg of Methamphetamine**
- Nationality / Age / Gender :
(Korea / **33** / Female)
- **Concealment of drug in underwear**

Analyzing and Targeting

3. June. 2024.

10. June. 2024.

20. July. 2024

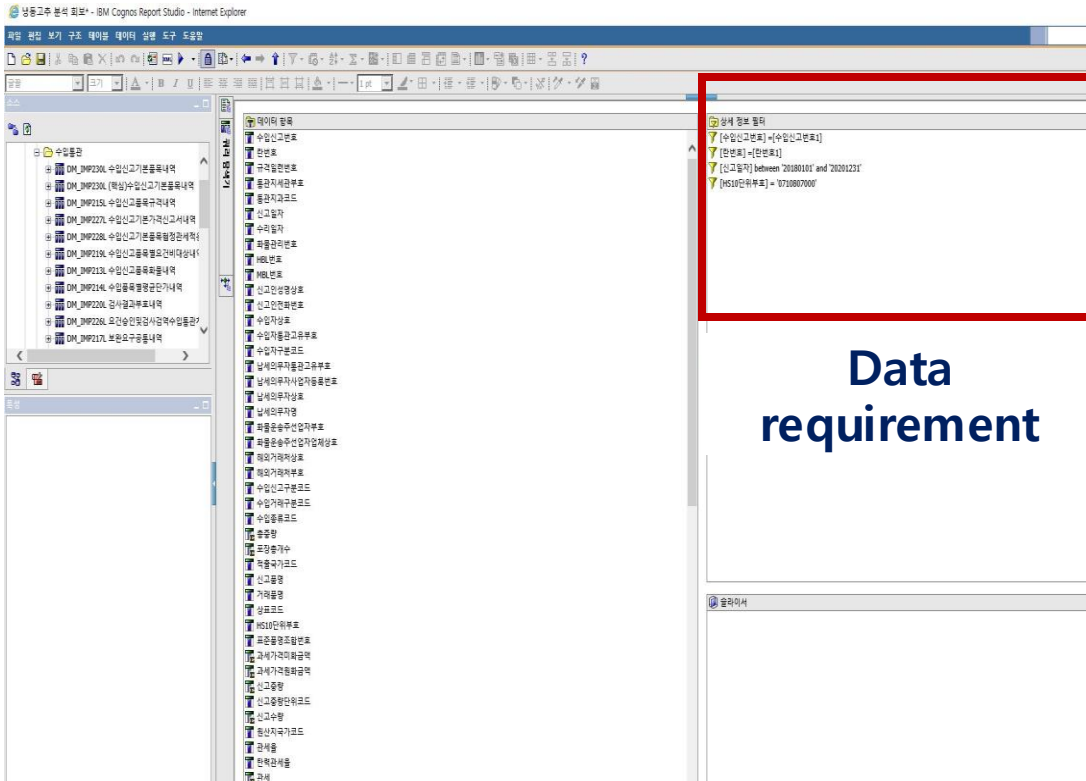

- Nationality / Age / Gender : Korea / 26~44 / Female
- **Concealment of drug in underwear**
- **Booked flight tickets 4 days before boarding the aircraft**

We analyze risk based on **Custom Date Warehouse(CDW)**

Risk Analysis

Analysis Tool – CDW Report Studio

Report Studio

Input Data Requirement -> Extract by excel, html

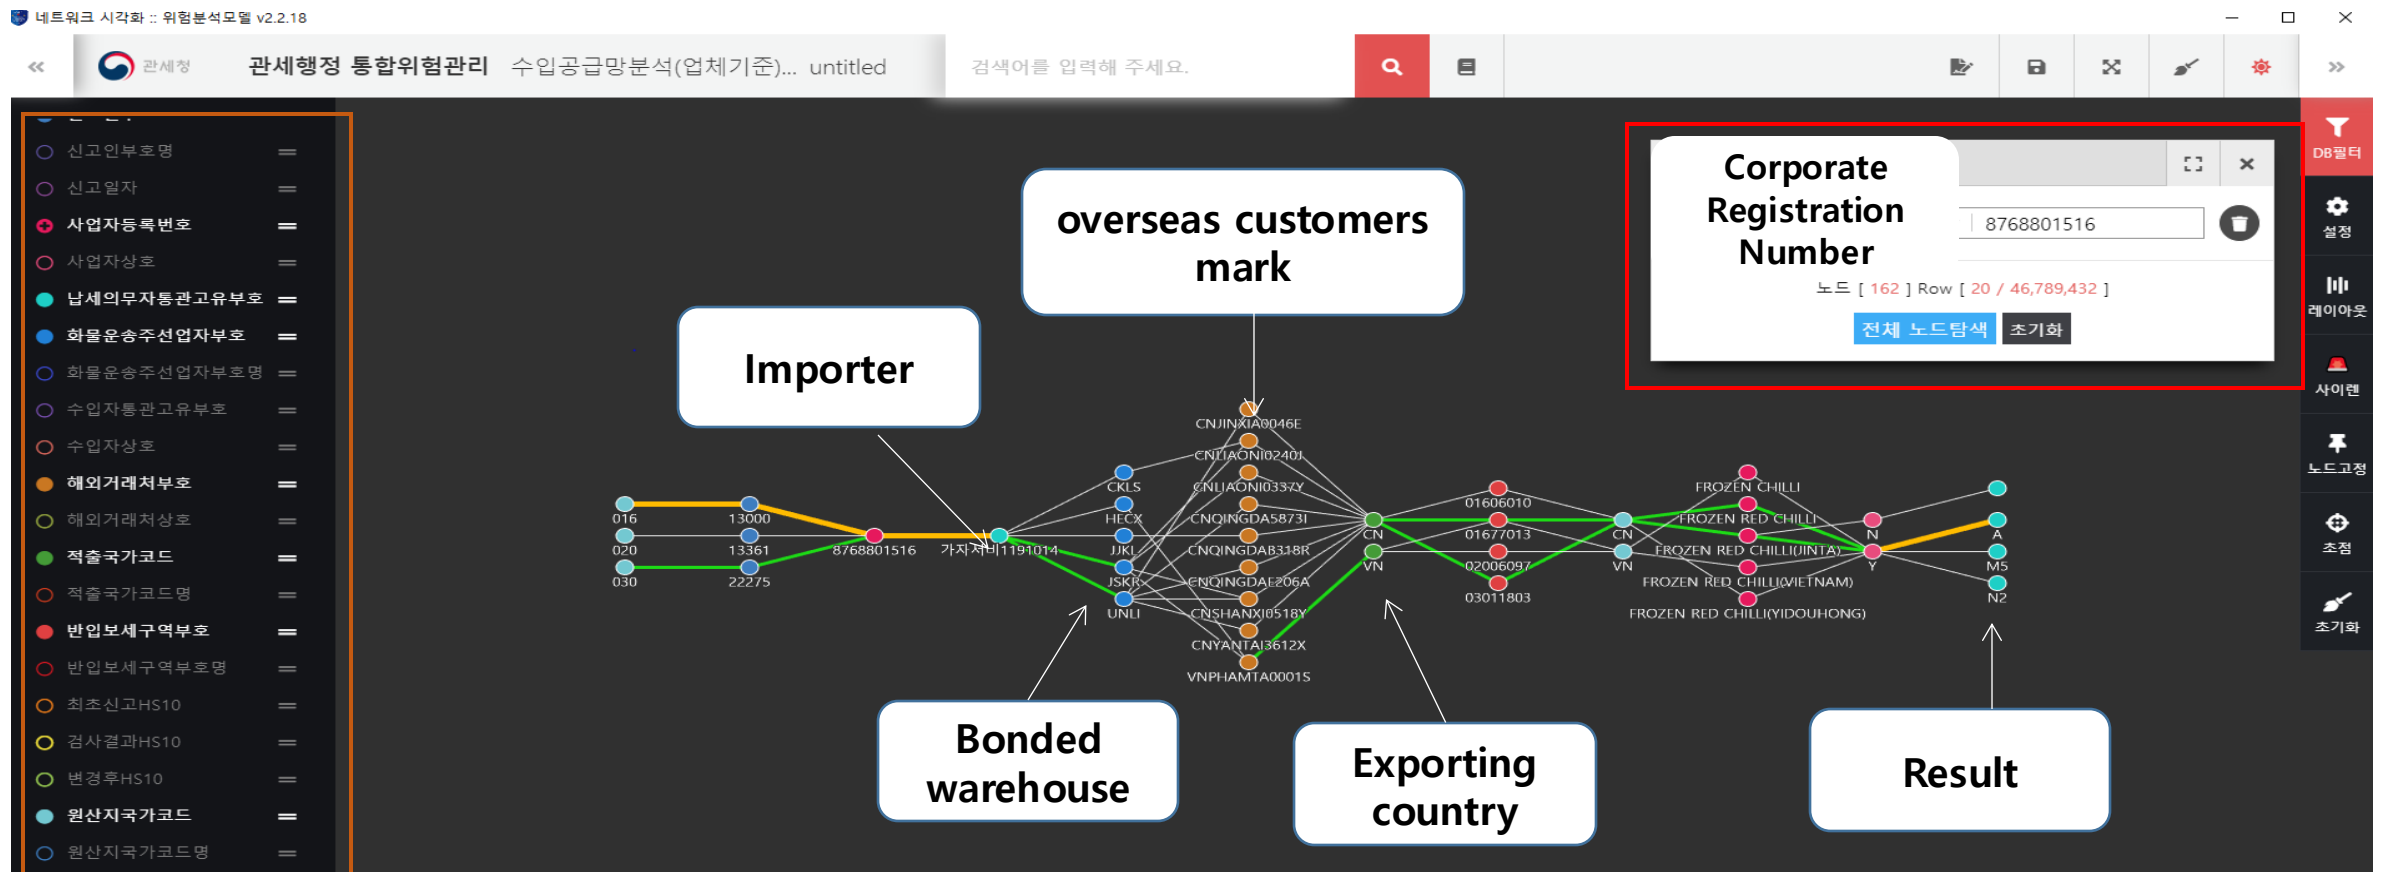

Query Report(SQL)

Input SQL -> Extract Data

Risk Analysis

Analysis Tool – Network Analysis in IRM System

Analyzing high-risk supply chain By using network analysis tool

Analyzing high risk passenger's companion By using Big Finder system

4. Selectivity Process

Selectivity Process

Selectivity Standard

For effectiveness, **Selectivity Standard** is managed in **two ways**

Central C/S

Local C/S

Application

more than
2 customs

Only
1 customs

**Registration,
Management**

CBTC

Local customs

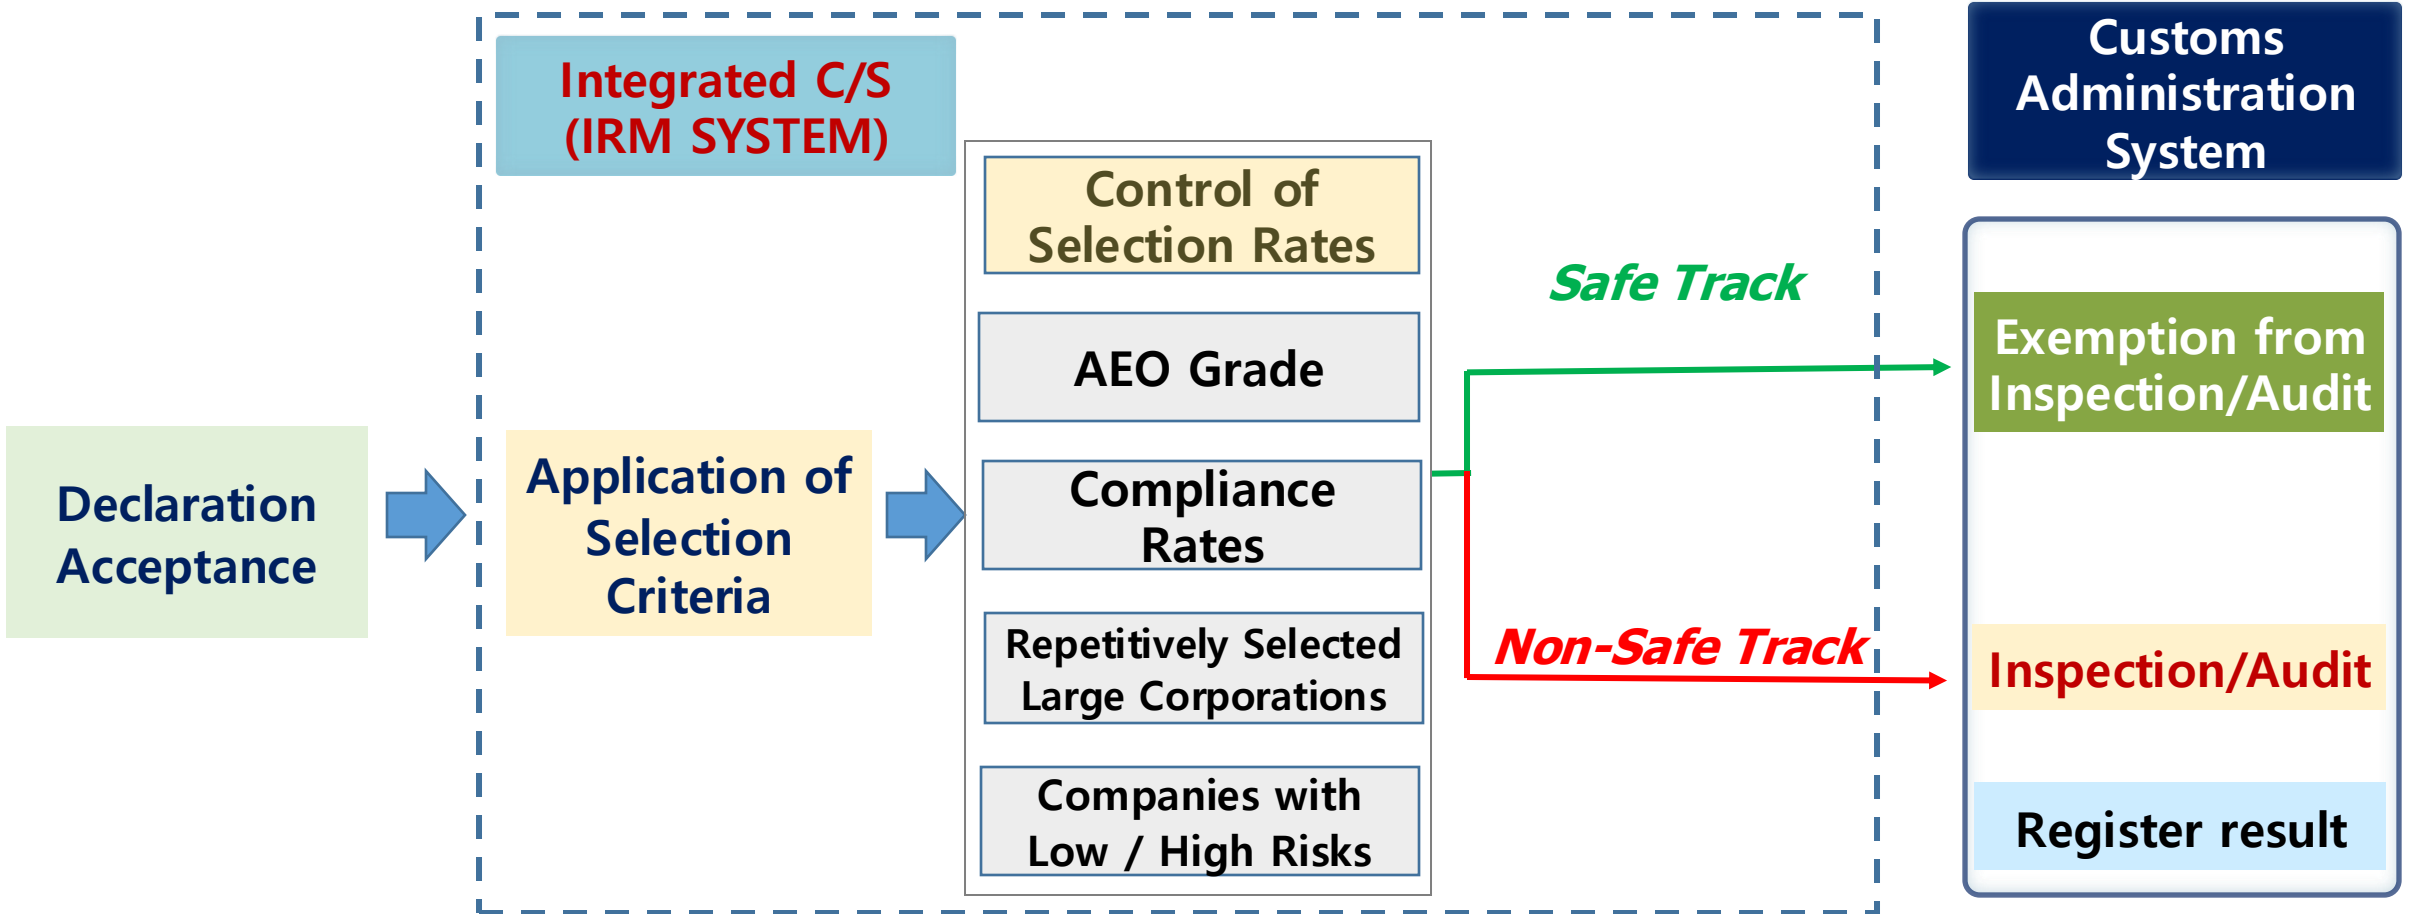

Object

All Customs

The region

Selectivity Process

Cargo Selectivity Process

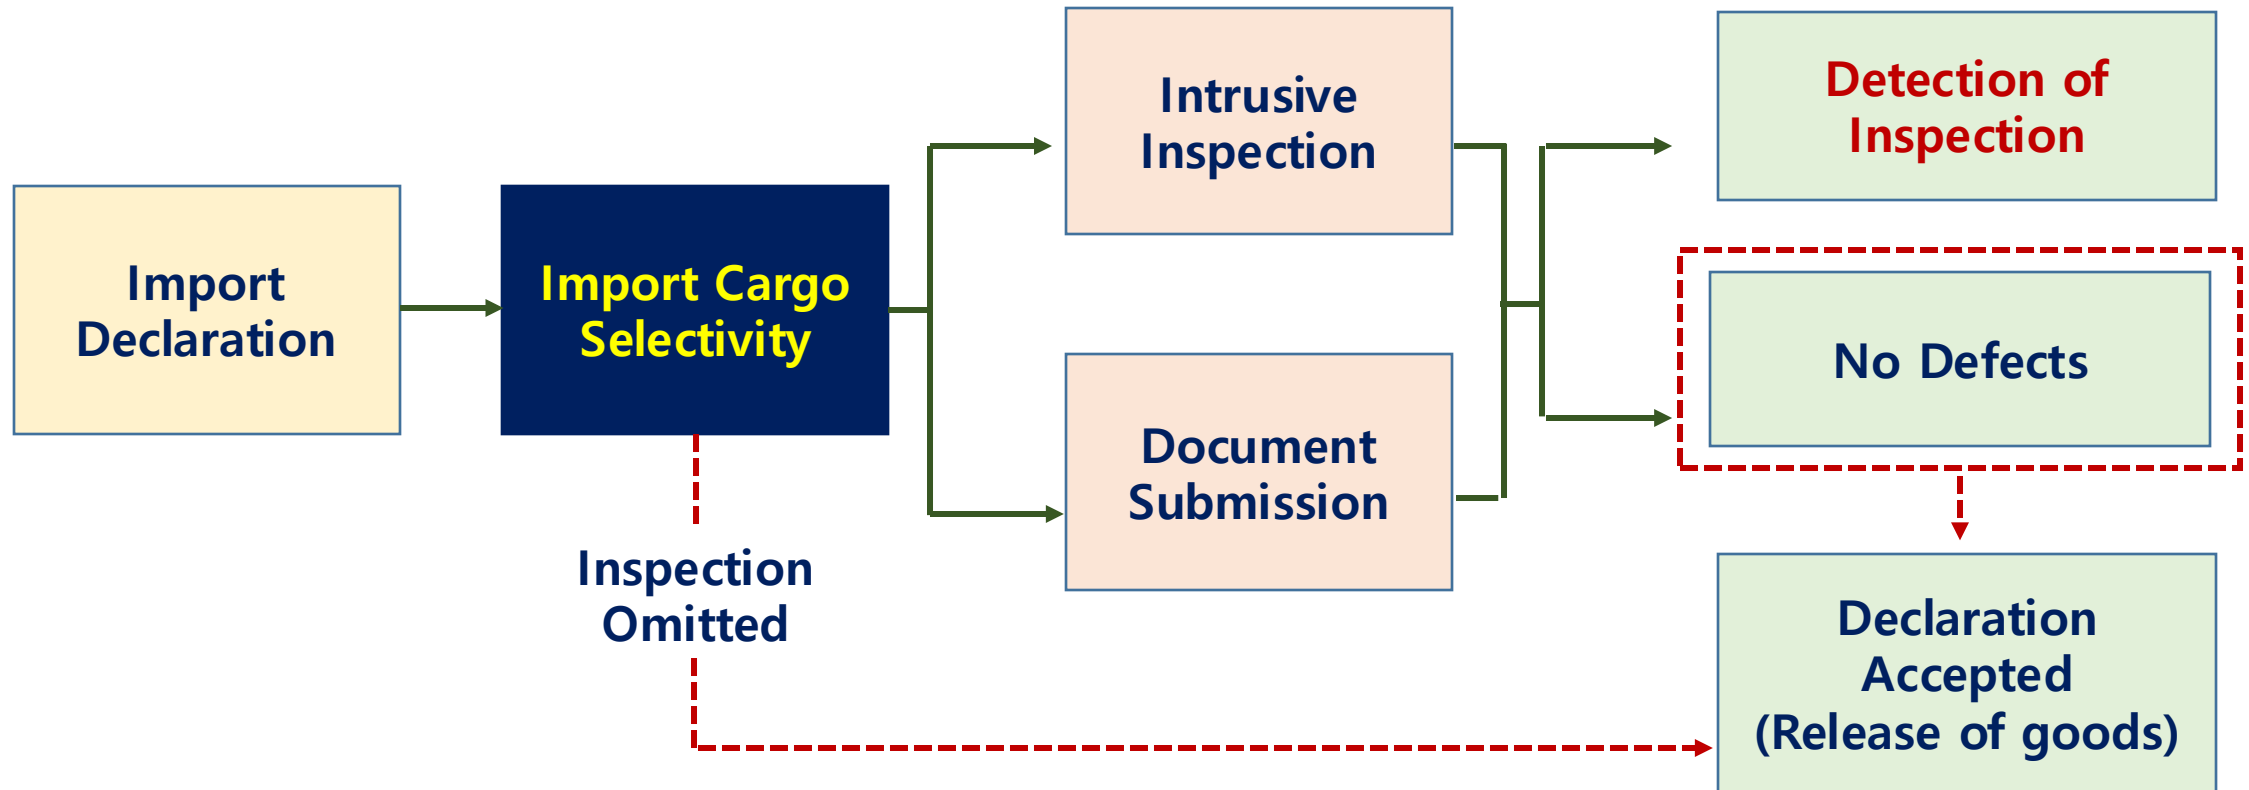

Automated Selectivity by system accounts for 85% in Import

- Selectivity based on : **Document of Import Declaration**
- When to Conduct : **After Submitting Import Declaration**
- Types : **Automatic Selectivity (85%), Manual Selectivity by officers(15%)**
- How to Examine : **To request relevant document or Examine the Goods**

Selectivity Process

Import Cargo Selectivity

Selectivity Process

Express Cargo Selectivity

Every express cargo must pass through an X-ray scanner

- Selectivity based on : **Manifest**
- When to Conduct : **After Submitting Manifest (1 hours prior to entry)**
- Types : **Automated Selectivity (13%),
Selectivity by X-ray interpreter(87%)**
- How to Examine : **Intrusive inspection**

Selectivity Process

Express Cargo Selectivity

Selectivity Process

Express Cargo Logistics Center (Incheon International Airport)

Automatic Sorter(Cross Belt)

Fixed Scanner(IPS)

X-ray Interpretation Room

Integrated Control Room

INTERNAL. This information is accessible to ADB Management and Staff. It may be shared outside ADB with appropriate permission.

Selectivity Process

High-Risk Passengers Selectivity(APIS*)

* APIS : **A**dvan**P**assenger **I**nformation **S**ystem

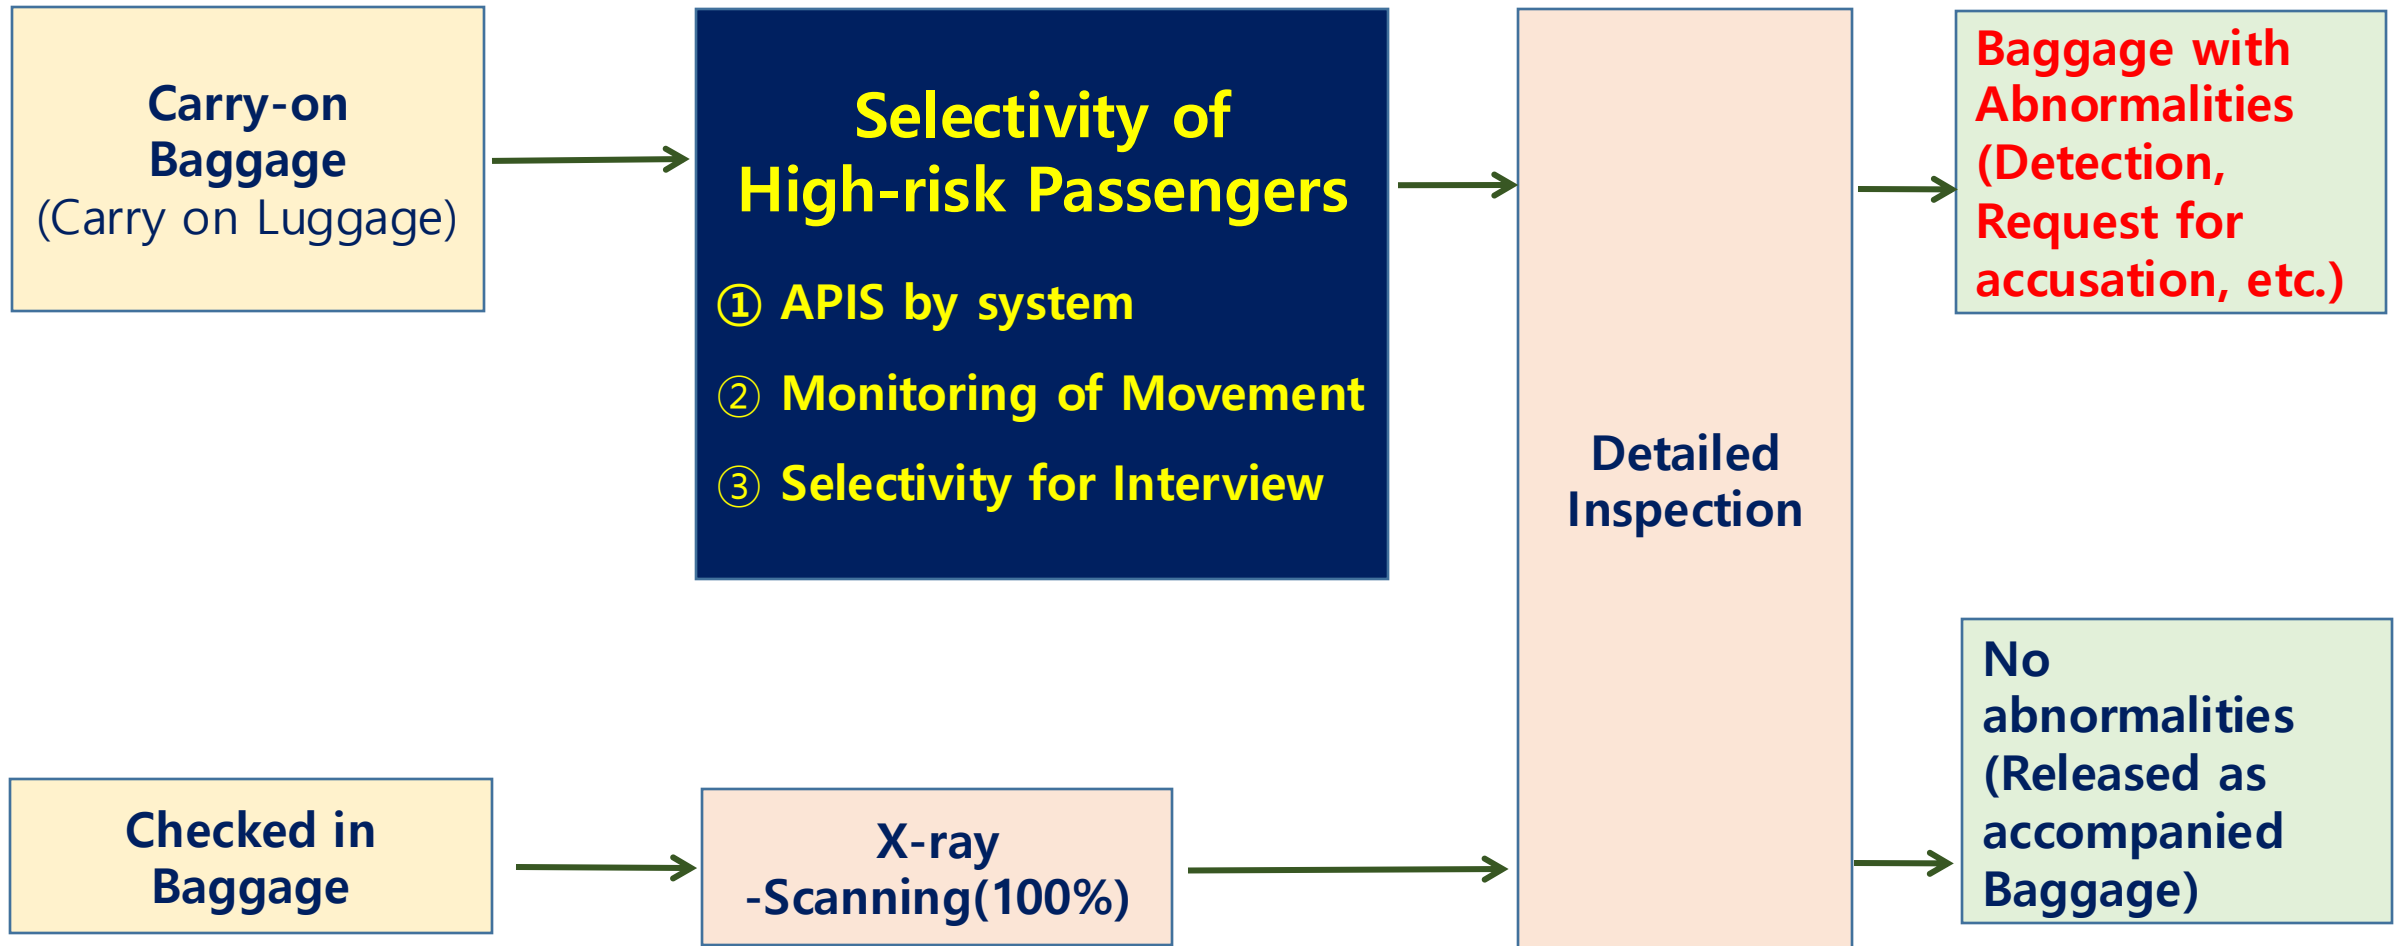

Passengers are selected **based on Passenger Name Record**

- Selectivity based on : **Passenger list and Passenger Name Record(PNR)**
- When to Conduct : **When Passenger list is submitted(30min prior to entry)**
When PNR is submitted(1hr prior to entry)
- Types : **Automated Selectivity, Manual Selectivity**
- How to Examine : **To conduct an Intrusive inspection at the customs Inspection place**

Selectivity Process

High-Risk Passengers Selectivity

KCS developed the AI C/S Based on **Big data** and **Deep learning**

Learning Data

Model learning & Evaluation

AI Cargo Selectivity

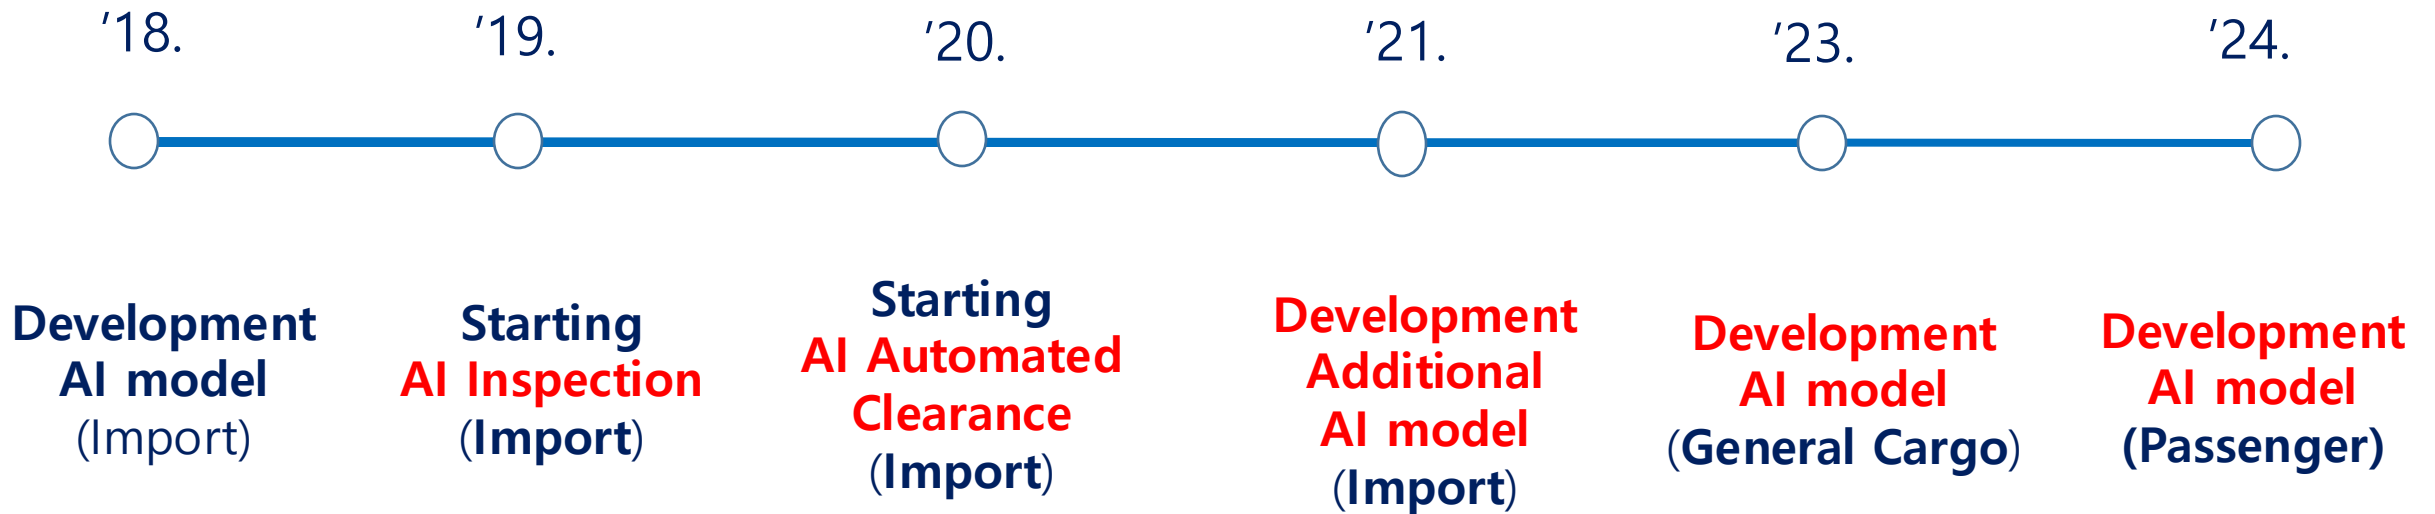

In Coding

Model Evaluation

Selecting & Updating Result

KCS has applied the **AI Selectivity for Import** Since 2019

Selectivity Process

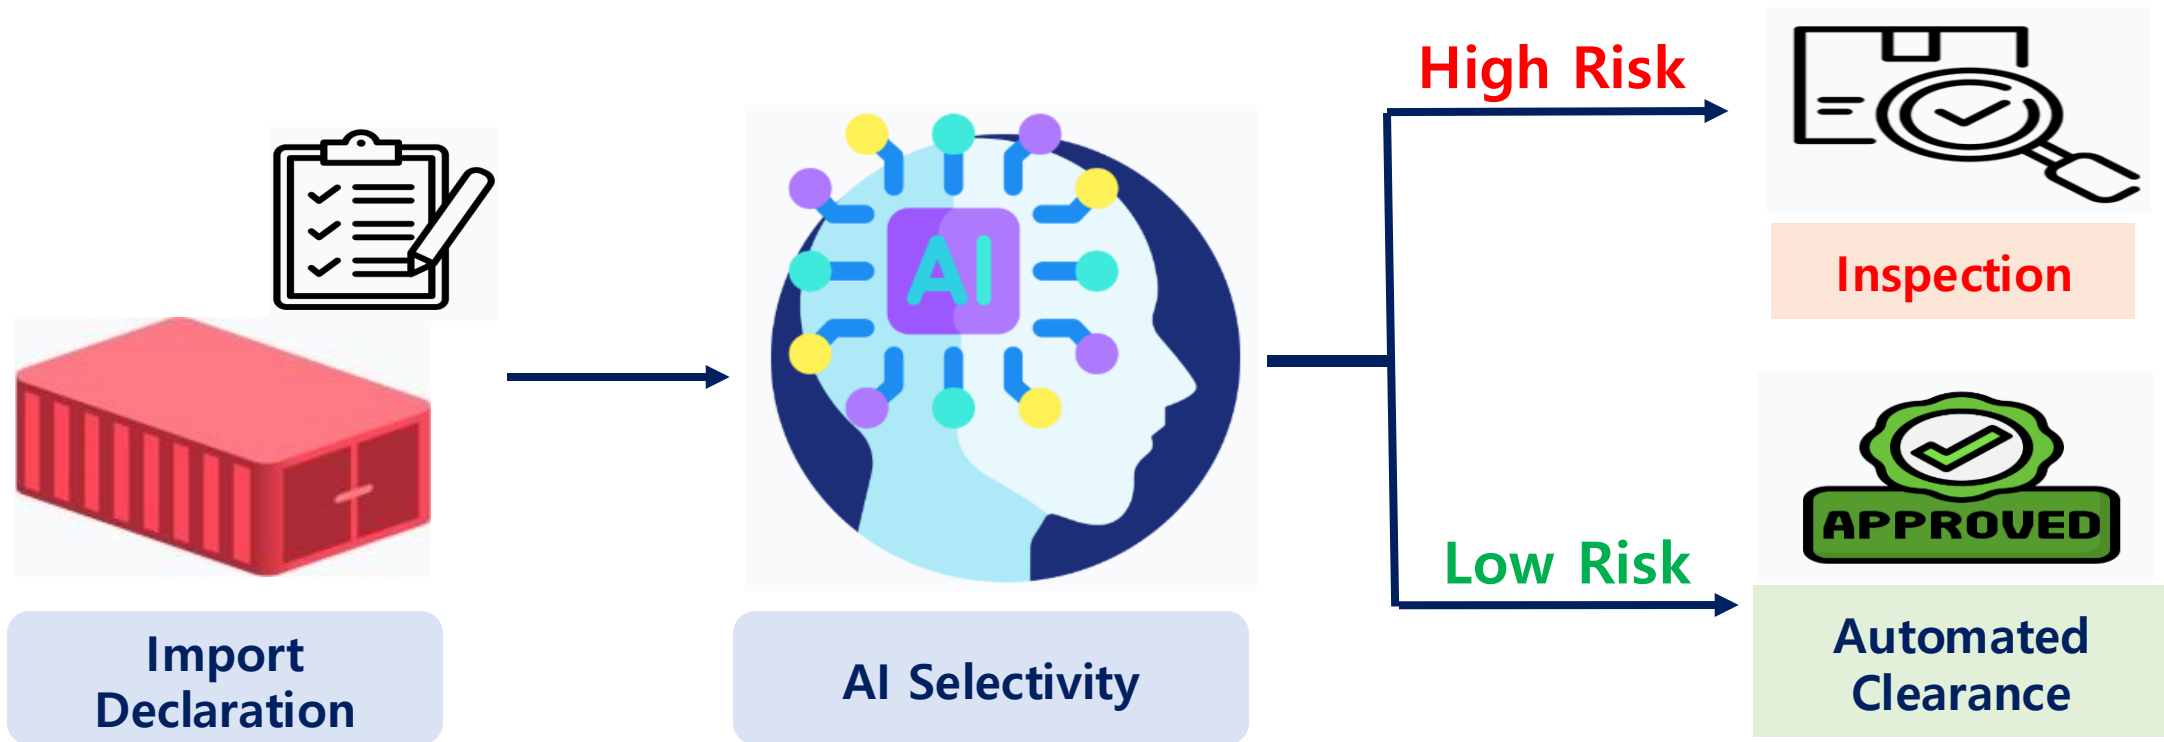

AI Targeting - Import

We have **2 types of Import AI Model (High risk, Supply chain)**

2019 AI Model	1. High risk model	Prior Import declaration & detection etc. (88)
	2. Supply chain	High risk supply chain relationship
2021 AI Model	1. High risk model	Prior declaration & detection + investigation + audit
	2. Supply chain	High risk supply chain relationship + Import declaration + compliance level

AI selects the High risk import Cargo for inspection

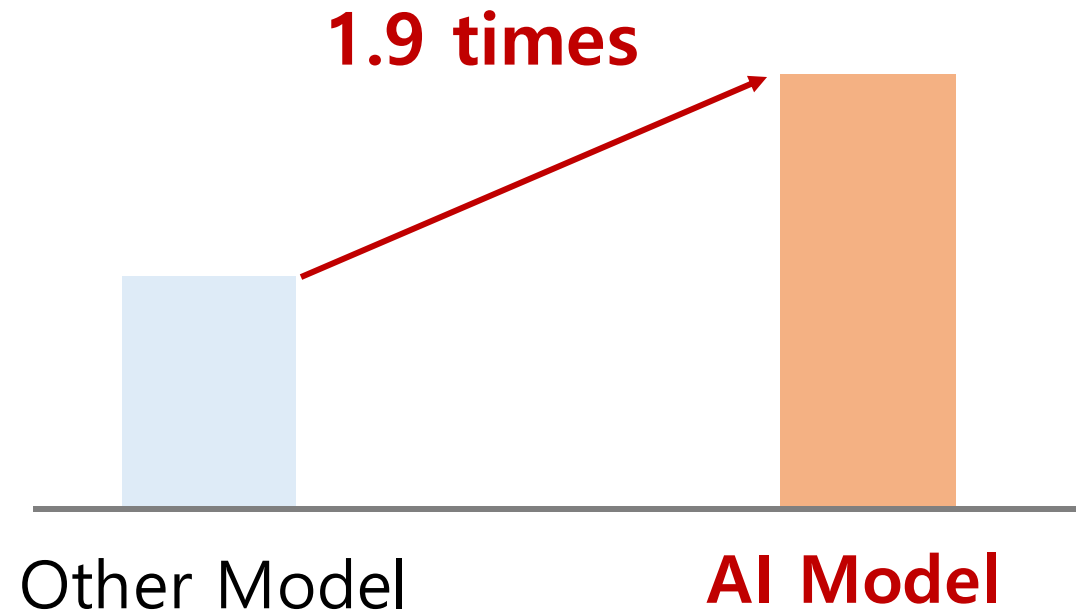

AI automatically approves Low risk import Cargo

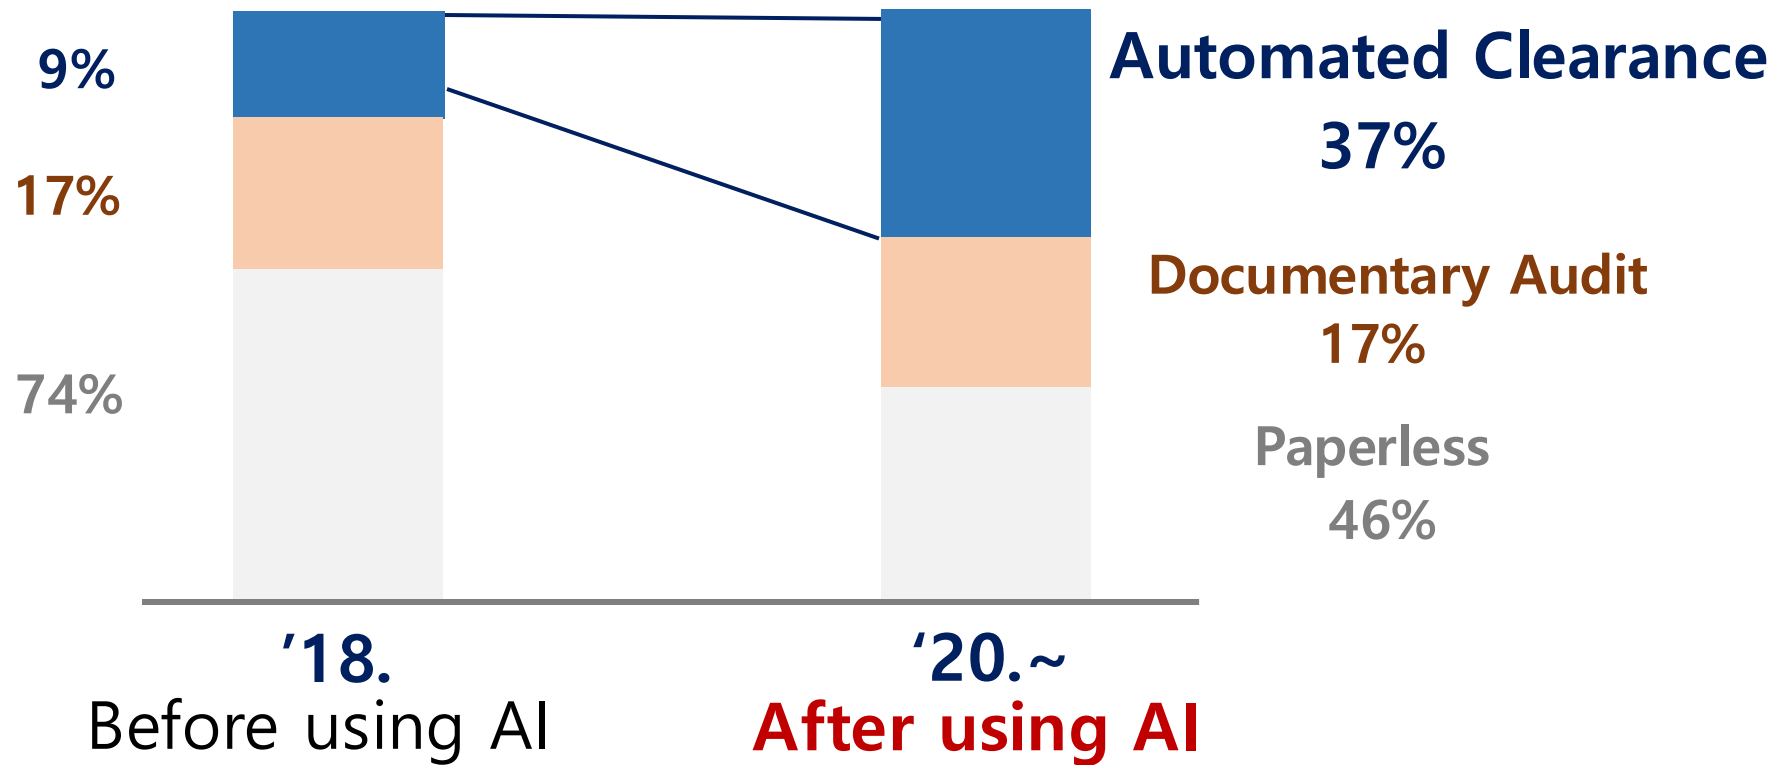

Selectivity Process

AI Operating Status – Import

Major Detection Rate

AI Model automatically approves Low risk Import declaration It **reduces the work** of customs officials

We have **2 types of AI Model (High risk, Supply chain)**

**High
Risk
Model**

Clearance
Information
of Targeted
cargo

Import
Clearance
Information

Information of
Seizure,
Inspection and
Assessment

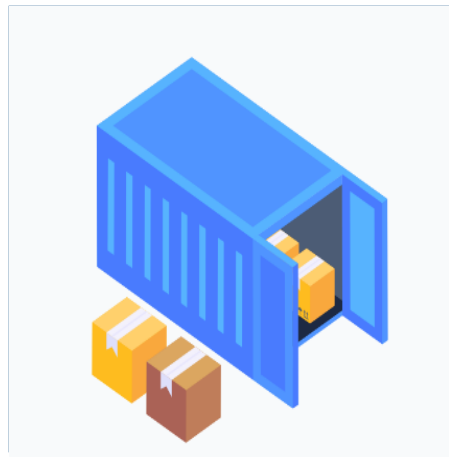

**Supply
chain**

4 Types of Supply Chain Pattern

Selectivity Process

AI High Risk Model – General Cargo

The AI High Risk Model has been developed by **combining the clearance data of controlled cargo and information of potential risks in other areas such as import and inspections.**

+

+

=

Clearance Data of
Controlled Cargo

Import Clearance

Inspection,
Seizure

General Cargo
High Risk
AI Model

Selectivity Process

AI High Risk Model – General Cargo

The AI High Risk Model was made with a combination of **structured data in the form of numbers and unstructured data in the form of text.**

AI Supply Chain Model – General Cargo

AI Supply Chain Model analyses four patterns and selects unusual patterns from it.

Pattern 1

Forwarder + Consignor + Consignee + Warehouse

Pattern 2

**Forwarder + Customs Office at the port of arrival +
A Country of Departure + Warehouse**

Pattern 3

Consignor + Customs Office at the port of arrival

Pattern 4

Consignee + Description of Goods

Selectivity Process

AI Operating Status – General Cargo

Major Detection Rate

AI Supply Chain Model – General Cargo

AI Supply Chain Model analyses four patterns and selects unusual patterns from it.

Pattern 1

Forwarder + Consignor + Consignee + Warehouse

Pattern 2
