Akylai

In Kyrgyzstan, a "smart" speaker that speaks the Kyrgyz language has been invented. It was named "Akylai", after the previously presented Kyrgyz neural network, AkylAI.

In October 2025, the **NineNineSix** startup unveiled the **KaniTTS** model, which generates realistic and expressive speech in real time.

The model can generate 15 seconds of speech in just 1 second – making it ultra-fast.

It supports several languages: English, German, Korean, Arabic, Chinese, and Spanish (with Kyrgyz and Japanese planned to be added).

On Hugging Face, the model is published as `nineninesix/kani-tts-370m`, with approximately 370 million parameters (0.37B), built on the principles of a small LLM.
